8. (Original) The system of claim 1, wherein the GUI further comprises:
a statistics indicator operative to indicate an amount of time the agent is in the current
availability state.

9. (Currently Amended) A method comprising:
presenting a work status indicator in a graphical user interface, wherein the work status
indicator identifies at least one of a plurality of availability states of an agent for each of a
telephone call and at least one text-based electronic communication for customer
communications; and
controlling the routing of customer communications to the agent based on a current
availability state of the agent, wherein the telephone call comprises a first priority and the at least
one text-based electronic communication comprises a second priority, and wherein the first
priority has a higher priority than the second priority.

10. (Currently Amended) The method of claim 9, ~~wherein the customer
communication comprises a telephone call, further comprising presenting a type of agent status
indicator based upon a customer type, wherein the customer type comprises a large business
customer, a small business customer, or an individual customer.~~

11. (Currently Amended) The method of claim 9, ~~wherein the customer
communication comprises an electronic communication~~ the graphical user interface is further

19. (Currently Amended) The article of claim 17, wherein ~~the customer~~
~~communication comprises an electronic communication~~ the graphical user interface is further
operative to indicate a plurality of text-based electronic communications.

20. (Currently Amended) The article of claim 19, wherein the plurality of electronic
communications ~~comprises~~ at least one of ~~one of~~ an email and a chat session.

21. (New) The method of claim 10, wherein at least one type of agent status indicator
comprises a comprehensive agent status indicator including detailed status information for the
large business customer.

22. (New) A method comprising:

presenting a work status indicator in a graphical user interface, wherein the work status
indicator identifies at least one of a plurality of availability states of a plurality of agents for each
of a telephone call and at least one text-based electronic communication for customer
communications; and

controlling routing of customer communications to one of the plurality of agents based on
a current availability state of the agent, wherein the telephone call comprises a first priority and
the at least one text-based electronic communication comprises a second priority, wherein the
controlling comprises routing customer communications comprising telephone calls to a first set
of agents, and wherein the controlling further comprises routing customer communications
